注:

1、以上数据是按照国际电筒测量标准ANSI/NEMA, FL1所述之测量方法。使用内置聚合物动力电池在实验室内测量所得，不同电池或使用环境可能会对以上数据产生影响；

2、电筒在开启30秒高亮档后会启用自降档功能。防止过热并且有效保护LED寿命，温度过高时手电开始缓慢降档，直到亮度低于70%，如果需要再用极亮档，只需关闭电筒再次打开即可。

⚠ 警告

不能将光线直接照射眼睛，以免对眼睛造成伤害.

02

操作手电

开关机: 单击尾按战术开关或侧按开关。

尾部战术开关: 除锁机模式下，尾部战术开关可一键按亮全功率点射。尾部战术开关打开手电后，侧按开关可以正常换档与关机。

拨盘开关: 4种模式，锁机↔白光↔白光+绿激光↔绿激光，为防止误碰，拨盘稍紧，建议双手操作。

锁机: 关闭电筒且按键操作无效。开关未关闭时锁机再解锁，电筒会恢复极低亮开机。长时间不用手电建议锁机后再锁机。

白光: 长按侧开关换档，依次是: 极低--低亮--中亮--高亮--极高亮（循环）中途松开再长按则往相反方向换档；换档松开10S或者关机再开机默认为升序档（带记忆）。任意档位时双击侧按开关爆闪。

白光+绿激光: 白光与绿激光5mw一起亮，长按侧开关换档亮度不变白光换档，依次是极低--低亮--中亮--高亮--极高亮（循环）中途松开再长按则往相反方向换档；换档松开10S或者关机再开机默认为升序换档（带记忆）。任意档位时双击侧按开关爆闪。

激光: 长按侧开关换档，高低两档，无记忆默认高亮档，任意档位时双击侧按开关爆闪。
爆闪: 快速轻触两次尾部战术开关或侧按开关。

1,The above data is measured according to the international flashlight measurement standard ANSI/NEMA, FL1-described measurement method, and obtained by testing with built-in li-polymer batteries in the laboratory. Different batteries or environments may affect the above data.

2,After 30 seconds of being turned on at high brightness, the flashlight will activate the automatic downshift function to prevent overheating and effectively protect the LED lifespan. When the temperature is too high, the flashlight will gradually downshift until the brightness is below 70%. If you need to use the high-brightness mode again, simply turn off the flashlight and turn it on again.

⚠

Do Not Expose Laser Light to Human Eyes.

User Operation

Power On/Off: Single-click the tail switch or side switch.

Tail Tactical Switch: except in lockout mode, the tail tactical switch can be used to instantly access the maximum brightness. After turning on the flashlight with the tail tactical switch, the side switch can be used to switch modes and turn off the flashlight normally.

Revolving Switch: 4 modes, Lockout ↔ White Light ↔ White Light + Green Laser ↔ Green Laser. To prevent accidental activation, the revolving switch is slightly tight , and it is recommended to operate with both hands.

Lock : when the flashlight is locked , all function is ineffective. unlock the flashlight when the tail tactical switch is on , the flashlight will restore ultra low brightness.

if the flashlight haven't been used for a very long time , please turn off it and then lock .

If released halfway through, then long-pressing again , mode changes will be in the opposite direction. After releasing the switch for 10s during mode change or turning off and then trun on again, it defaults to ascending mode change (with memory function). Double-clicking the side switch at any mode will activate the strobe.

2,White Light + Green Laser: When revolving switch pointer points to white light + green laser, press the side switch once to turn on both white light and 5mW green laser. When the side switch is long-pressed, the laser brightness remains constant while the white light changes modes : ultra-low, low, medium, high, and highest (cycling). If released halfway through, then long-pressing again , mode changes will be in the opposite direction. After releasing the switch for 10 seconds during mode change or turning off and then turn on again, it defaults to ascending mode change (with memory function). Double-clicking the side switch at any mode will activate the strobe.

3, Laser: When revolving switch pointer points to laser, press the side switch once to turn on the laser. long-press the side switch to change between two modes: high and low .no memory function, the default mode is high brightness. Double-clicking the side switch at any mode will activate the strobe.
